Lead Quality Engineer with 16 years across test automation, performance engineering and CI/CD — the last five building the testing platform the whole FanDuel Sportsbook org depends on. I design the systems other engineers test through: AI-driven test automation, statistical performance-regression detection, cross-platform native E2E, and CI I made ~70% faster. A shift-left practitioner who prevents defects rather than catches them, and a force multiplier bridging capability-building and feature teams to raise quality maturity — engineering quality into how teams build rather than gating them from the outside.

~70%

faster CI test runs

EXPERIENCE

Lead Quality Engineer — Sportsbook · FanDuel

2022 – Present · Edinburgh, UK

Own the test strategy and Quality Maturity Model (pillars, layers, levels) for the Sportsbook RN/web monorepo across iOS, Android and web.

Built a Python E-Divisive + Datadog performance-regression detector gating CI with <2% false-positive noise and Slack alerting.

Pioneered AI-driven E2E by integrating wix-pilot — tests authored in natural language over a reusable prompt library, not imperative code.

Cut native test runs ~70% (4-way Buildkite/Jest sharding) and test-build time ~80% (180m→30m) via build sharing + a hybrid git-aware cache, on Terraform S3 + Bedrock infra.

Built cross-platform native E2E (Appium/WebdriverIO + Detox, Percy visual) and launch-argument testability — runtime env switching, mock injection, prod-safe testIDs.

Introduced SonarCloud PR quality gates (coverage, readability, maintainability, security) — codebase coverage 55%→70%, duplication 45%→20%.

Senior Quality Engineer — Sportsbook · FanDuel

2021 – 2022 · Edinburgh, UK

Implemented automation frameworks across iOS, Android and web — Cypress for web, Appium for iOS and Android.

Authored the Detox acceptance framework, screen-object patterns and onboarding docs, and stood up the foundational CI test pipelines and Datadog observability later work built on.

Lead / Senior Test Analyst — Automation · Cognizant

Jul 2017 – 2021 · Edinburgh, UK

Built UI and API automation frameworks from scratch (Protractor-Cucumber-TypeScript; ReadyAPI + Groovy assertion library) and the Azure DevOps pipelines to run them — Royal London, Resonate Tech. Delivered an accessibility-regression framework that cut effort ~40%, plus a UI error-handling/mockings framework.

Authored Gherkin standards adopted across Test/BA/Dev and trained clients and peers to scale automation.

Offshore Test Lead / Senior Test Analyst · Cognizant

Jan 2010 – Jul 2017 · Chennai & Coimbatore, India

Led a 7-member offshore test team for Voya Financial — capacity planning, cross-module KT and status reporting across five modules.

Kick-started automation with a Selenium/TestNG POC and Excel-macro tooling; delivered functional/regression testing for Travelers and Lincoln Financial.

CORE SKILLS

- Strategy & architecture** — Quality Maturity Model, shift-left / defect prevention, test pyramid, contract testing, screen-object patterns, BDD/Gherkin, accessibility, mentoring.

Performance & reliability — E-Disvisive regression detection, baseline/anomaly detection, iOS/Android perf instrumentation, Datadog, Sentry, SLOs.

Web & API — Protractor, Cucumber, Selenium, SpecFlow, ReadyAPI, Postman, Mountebank/WireMock.
- Mobile & E2E** — Detox (RN), Appium/WebdriverIO, Maestro, wix-pilot, Percy, Cypress, Jest/RTL, BrowserStack.

CI/CD & infra — Buildkite, GitHub Actions, Jest sharding, hybrid iOS build caching, Terraform/AWS (S3, IAM, Bedrock), Azure DevOps, Docker.

Languages — TypeScript, JavaScript, Python, Bash, C#, Groovy, SQL.

AI ENGINEERING

Design agentic solutions other engineers reuse, working plan-and-implement (spec-first). Daily: Claude / Claude Code, Cursor, Copilot. Authored reusable org-wide agent skills — a multi-agent **Performance Impact Review** (change-point report → validated, remediation-ready review) and an **Acceptance-Test Debugger** that self-updates its known-error playbook.
